## ABOUT US

Flow Assessment Services, LLC is a wastewater collection system company providing high quality services in the field of sewer system evaluations and flow monitoring. Our team of seasoned professionals have over a hundred years of combined experience performing wastewater collection system studies. The companies' principals and project managers possess considerable technical expertise and have the necessary problem solving skills to make your project a success. Their many years of field experience and dedication to a job well done are second to none in the industry. In addition, they all hold a Grade IV Wastewater Collection System Operation certification.

Our philosophy is, and always will be, to build long-term relationships within our industry by providing to the client, accurate, professional and cost efficient services. As a sub consultant to professional engineering firms and municipalities throughout the Northeast United States, we understand our role, to deliver exact, timely data, in a format most useful to the client. Our customized field data acquisition and management software allows us to provide our clients with accurate information even though each system we enter is diverse and has its own unique problems. Besides our software capabilities, our up to date field and office equipment provides our staff with the latest and most modern equipment available. All our survey vehicles are furnished with OSHA approved equipment. This not only assures the safety and efficiency of our field crews, but it also illustrates to the client and owner that Flow Assessment Services is serious about safety. Whether your project is large or small, complicated or relatively simple, Flow Assessment Services can provide the expertise you need to successfully complete the job.

The Flow Assessment Services, LLC team of experienced personnel proudly provide the following services:

### **OPEN CHANNEL FLOW MONITORING**

Using the latest in monitoring equipment we provide both temporary and permanent (telemetry or wireless) flow monitoring in sewer, drain and combined sewer over-flow structures. Our field staff has extensive experience with all major meter manufacturers' equipment.

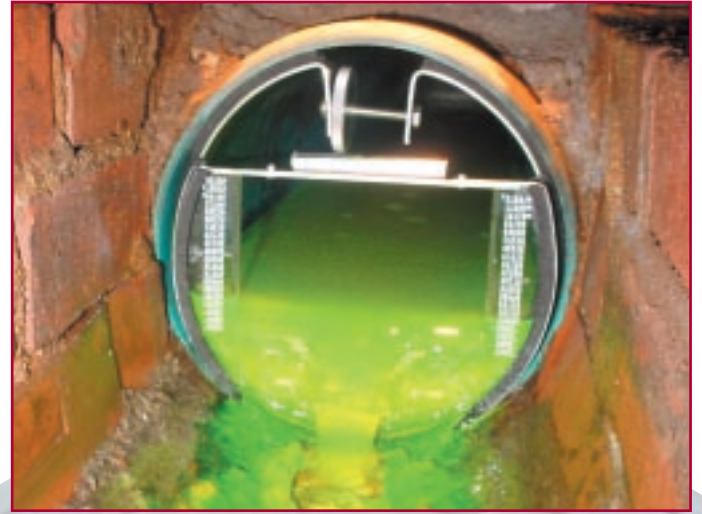

### **MAPPING AND MANHOLE INSPECTIONS**

We provide accurate field verified mapping and manhole inspection services, complying with all confined entry procedures and protocols.

## DYED WATER TESTING / TRACING

Our self contained high production systems allow our crews to perform the tests with minimal disruption to local residents and the business community.

## SMOKE TESTING

A fast and efficient method to locate inflow sources. Our crews use both the liquid smoke system or smoke candles in conjunction with high power blowers to identify cross connections.

## FLOW ISOLATION

Flow Isolation further pinpoints the sources of infiltration and provides an excellent overview of the systems integrity.
